Education

Dalhousie University

Halifax, NS

Bachelor of Science in Applied Computer Science, Sexton Scholar

Jan 2023 – Expected Aug 2027

Certificates: Web and Mobile Development; User Experience Design and Evaluation

Relevant Courses: Data Structures, Web Development, Database Systems, Mobile Computing, Usable Security and Privacy, UX Design, UI Design, User-Centered Design

Technical Skills

Languages: Java, JavaScript, SQL, HTML, CSS, TypeScript, Python

Frameworks & Libraries: React.js, Node.js, Flask, React Native, Expo

Databases: MySQL, SQLite, MongoDB, Firebase/Firestore

Tools: Git, GitHub, Jira, VS Code, IntelliJ, Android Studio, Figma

APIs & Integrations: REST APIs, Hugging Face API, Google Places API, GeoApify, PayPal SDK, Financial APIs

Concepts: OOP, Data Structures & Algorithms, MVC, SDLC, Database Design, Unit Testing, Debugging, Agile, Responsive Design, UI/UX Design

Experience

Scott IT Consultant (SCITCO)

Remote / Montreal, QC

Freelance Product Designer

Jun 2026 – Jul 2026

- Designed and structured a responsive business website for a Montreal-based IT consulting company.
- Worked on layout structure, content organization, visual consistency, and user-friendly page flows.
- Created design direction and implementation-ready website structure for desktop and mobile users.
- Improved how company services were presented through clearer sections, navigation, and calls to action.

Academic Projects

Degree Planner — Academic Planning Web Application

React, Flask, MySQL, Git

- Worked as a senior developer on a team project to help Dalhousie students plan CSCI courses semester by semester.
- Designed MySQL database tables for users, authentication, password management, courses, and prerequisites.
- Contributed to login, signup, and password change functionality.
- Manually structured course and prerequisite data because no university API or course database was available.
- Used Git for collaboration across a six-person team with senior and junior developers.

AI Flashcard Generator — AI Learning Tool

React, Node.js, MongoDB, Hugging Face API

- Built an AI-powered flashcard generator that allows students to upload PDF or text notes and generate study material.
- Worked on backend, database, and AI integration as part of a two-person team with equal contribution.
- Integrated Hugging Face API and PDF-to-text processing to convert uploaded notes into structured flashcard content.
- Added options for users to choose the number of flashcards and difficulty level.
- Stored generated flashcards, user data, and credit-based flashcard sets in MongoDB.

Geriatric Psychotropic Green Card — Drug Reference Application

React, JavaScript, Node.js, MySQL

- Worked as a junior developer on NSHA project for a drug reference application used by healthcare professionals.
- Built and updated frontend components using React and JavaScript.
- Updated existing MySQL data for drug reference content.
- Gained experience with health-related information, Agile teamwork, client communication, and professional development practices.

FocusTrail — Mobile Study Productivity App

React Native, Expo, Firebase/Firestore, Google Places API

- Built a mobile application to help students find productive study locations, track study sessions, and rate study environments.
- Implemented location-based search using Google Places API and GeoApify for nearby libraries, cafes, and study spaces.
- Developed study session tracking features including start time, end time, study history, and location ratings.
- Added favorite locations and map-based features using Firebase/Firestore for data storage.

Job Marketplace Mobile Application

Java, Android Studio, Firebase, JUnit, Espresso

- Built an Android mobile application for job posting, browsing, applying, and filtering jobs as part of a five-person academic team.
- Implemented features for user authentication, job listings, search and filtering, and job applications.
- Integrated PayPal SDK for payment functionality.
- Used JUnit and Espresso for automated testing of application functionality.

Personal Projects

Professional Stock Dashboard

JavaScript, Financial APIs

- Built a responsive stock dashboard to monitor market performance, stock information, and portfolio activity.
- Integrated financial APIs to display market data and key stock information.
- Implemented stock watchlists, charts, key indicators, basic portfolio tracking, and responsive UI.

Personal Portfolio Website

HTML, CSS, JavaScript, Formspree

- Developed a responsive personal portfolio website to showcase projects, technical skills, and contact information.
- Implemented contact form validation with Formspree integration.
- Added animations, interactive UI elements, project timeline, and links to GitHub and deployed projects.
