Halifax, NS — (647) 897-4634 — [harshil.lotwala@dal.ca](mailto:harshil.lotwala@dal.ca) — [GitHub](#) — [LinkedIn](#) — <https://harshil-lotwala.github.io/Portfolio/>

## Education

**Dalhousie University** — Halifax, NS

**Jan 2023 – Expected Aug 2027**

Bachelor of Science in Applied Computer Science, **Sexton Scholar**

*Certificates:* Web and Mobile Development; User Experience Design and Evaluation

*Relevant Courses:* Data Structures, Web Development, Database Systems, Mobile Computing, Usable Security and Privacy, UX Design, UI Design, User-Centered Design

## Technical Skills

**Languages:** Java, JavaScript, SQL, HTML, CSS, TypeScript, Python

**Frameworks & Libraries:** React.js, Node.js, Spring Boot, Flask, React Native, Expo, Tailwind CSS

**Databases:** MySQL, SQLite, MongoDB, Firebase/Firestore, PostgreSQL, Supabase

**Tools:** Git, GitHub, Jira, VS Code, IntelliJ, Android Studio, Figma, Postman, Docker

**APIs & Integrations:** REST APIs, Hugging Face API, Google Places API, GeoApify, PayPal SDK, Financial APIs

**Concepts:** OOP, Data Structures & Algorithms, MVC, SDLC, Database Design, Unit Testing, Debugging, Agile, Responsive Design, UI/UX Design

## Experience

**Scott IT Consultant (SCITCO)**

*Remote / Montreal, QC*

*Freelance Product Designer*

*Jun 2026 – Jul 2026*

- Designed and structured a responsive business website for a Montreal-based IT consulting company.
- Worked on layout structure, content organization, visual consistency, and user-friendly page flows.
- Created implementation-ready desktop/mobile designs and improved service presentation through clearer navigation and calls to action.

## Academic Projects

**Degree Planner — Academic Planning Web Application**

*React, Flask, MySQL, Git*

- Worked as a senior developer on a six-person team to help Dalhousie students plan CSCI courses semester by semester.
- Designed MySQL tables for users, authentication, password management, courses, and prerequisites; contributed to login, signup, and password-change functionality.
- Manually structured course and prerequisite data due to the absence of a university API and collaborated through Git with senior and junior developers.

**AI Flashcard Generator — AI Learning Tool**

*React, Node.js, MongoDB, Hugging Face API*

- Built an AI-powered flashcard generator that converts uploaded PDF or text notes into structured study material.
- Worked on backend, database, and AI integration in a two-person team, including Hugging Face API and PDF-to-text processing.
- Added configurable flashcard quantity and difficulty while storing generated flashcards, user data, and credit-based sets in MongoDB.

**Geriatric Psychotropic Green Card — Drug Reference Application (NS Health)** *React, JavaScript, Node.js, MySQL*

- Worked as a junior developer on an NSHA project for a drug reference application used by healthcare professionals.
- Built and updated frontend components using React and JavaScript and maintained existing MySQL drug-reference data.
- Gained experience with Agile teamwork, client communication, health-related information, and professional development practices.

**FocusTrail — Mobile Study Productivity App**

*React Native, Expo, Firebase/Firestore*

- Built a mobile application for finding productive study locations, tracking study sessions, and rating study environments.
- Implemented location-based search using Google Places API and GeoApify for nearby libraries, cafes, and study spaces.
- Developed session history, location ratings, favorites, and map-based functionality with Firebase/Firestore data storage.

**Job Marketplace Mobile Application**

*Java, Android Studio, Firebase, JUnit, Espresso*

- Built an Android application for job posting, browsing, applying, search, and filtering as part of a five-person academic team.
- Implemented authentication, job listings, applications, search/filter functionality, and PayPal SDK payment integration.
- Used JUnit and Espresso to create automated tests and validate application functionality.

## Personal Projects

**Perfect Run — Cricket Drafting & Season Simulation Game** *Java, Spring Boot, React, PostgreSQL, Supabase, Docker*

- Built and deployed a full-stack cricket drafting and tournament simulation game using historical Cricsheet data across IPL, ODI World Cup, T20 World Cup, and World Test Championship formats.
- Developed seeded simulations, player ratings, scorecards, standings, qualification and knockout logic, captain/keeper effects, and server-verified Hard Mode leaderboards.
- Deployed the React frontend and Spring Boot API using GitHub Pages, Render, Docker, GitHub Actions, and Supabase PostgreSQL.

**Vaibhavi's Kitchen — Production Website & Menu Management System**

*HTML, CSS, JavaScript, Netlify*

- Designed and deployed a production website for a family-owned multi-cuisine home-kitchen business with searchable menus, category filtering, WhatsApp ordering, Google Maps integration, and responsive layouts.
- Built an owner-facing admin system enabling non-technical users to manage menu items and categories, with shared online menu data persisted through Netlify Blobs.
- Implemented serverless authentication with authorized owner accounts, signed sessions, Secure/HttpOnly cookies, password management, protected menu updates, and automated deployment.

**Professional Stock Dashboard**

*JavaScript, Financial APIs*

- Built a responsive stock dashboard to monitor market performance, stock information, and portfolio activity.
- Integrated financial APIs to display market data and key stock information.
- Implemented stock watchlists, charts, key indicators, basic portfolio tracking, and responsive UI.
