Education

Dalhousie University — Halifax, NS

Jan 2023 – Expected Aug 2027

Bachelor of Science in Applied Computer Science, **Sexton Scholar**

Certificates: Web and Mobile Development; User Experience Design and Evaluation

Relevant Courses: UX Design, UI Design, User-Centered Design, Usable Security and Privacy, Web Development, Mobile Computing, Database Systems

Technical Skills

UX Research: Focus Groups, Affinity Diagrams, Comparative Evaluation, Think-Aloud Testing, Task Observation, Questionnaires, Semi-Structured Interviews

Product Design: User Flows, Information Architecture, Wireframes, Interactive Prototypes, Responsive Interaction Design, Design Systems

Interface Design: Figma, Mobile UI, Web UI, Foldable and Wearable Interfaces, Visual Hierarchy, Component States, Accessibility

Front-End: HTML, CSS, JavaScript, TypeScript, React.js, React Native, Expo, Tailwind CSS

Tools & Workflow: Figma AI, CLaude Cursor, Codex, Git, GitHub, Jira, VS Code, Agile, Usability Evaluation, Iterative Design

Experience

Scott IT Consultant (SCITCO)

Remote / Montreal, QC

Freelance Product Designer

Jun 2026 – Jul 2026

- Designed and structured a responsive service website that presents the company's technical services clearly and guides potential clients toward consultation booking.
- Defined the information architecture, content hierarchy, service-page structure, navigation, and consultation flow across desktop and mobile layouts.
- Created implementation-ready responsive interfaces with consistent typography, reusable components, interaction states, and touch-friendly navigation.

UI/UX Projects

North Atlantic Bank — Responsive Banking Experience

Product Design, UI/UX, Front-End Prototyping

- Designed a high-fidelity mobile banking experience specifically for the iPhone Duo form factor across closed, open, split-screen, portrait, and landscape configurations.
- Built an interactive responsive prototype with independent Split-mode navigation and complete flows for accounts, cards, investments, Interac e-Transfer, bill payments, and profile management.
- Created a consistent interface system with Touch ID authentication, password visibility, loading and system states, accessible controls, rotation-aware layouts, and light/dark appearance options.

FreshLocal Farmers' Market — Mobile Commerce Prototype

Figma, Mobile UI, Interactive Prototyping

- Designed an eight-screen mobile-commerce flow for discovering local produce, reviewing farm information, and selecting pickup or delivery.
- Structured the journey from browsing and filtering through product details, cart management, fulfilment, order confirmation, notifications, and profile settings.
- Built an interactive front-end prototype with persistent multi-item cart state, quantity controls, checkout choices, responsive layouts, and clear system feedback.

Vaibhavi's Kitchen — Production Website & Menu Platform

Product Design, Responsive UI, JavaScript

- Designed a responsive customer experience for a family-owned multi-cuisine home kitchen, covering menu discovery, category filtering, dish details, pickup information, and WhatsApp ordering.
- Organized the information architecture and content hierarchy so customers can scan dishes, understand availability, and move from browsing to ordering with minimal friction.
- Created desktop and mobile interface patterns alongside an owner-facing menu-management experience that allows non-technical users to update items and categories without editing code.

DAL Connect — Phone and Apple Watch Experience

Interaction Design, Mobile UI, Wearable UI

- Designed a cross-device interaction concept focused on clearer system feedback, scheduling, networking, reminders, and study-space booking.
- Created phone flows for group membership, posts, reminders, weekly schedules, form input, navigation, and persistent confirmation states.
- Developed an interactive Apple Watch flow for nearby networking, messaging, calendar entries, availability selection, booking, and confirmation feedback.

Housing & Roommate Matching — UX Research Case Study

Research, Affinity Mapping, Low-Fidelity Wireframes

- Conducted a focus group and comparative evaluation to examine student needs around affordability, location, trust, verification, and roommate compatibility.
- Synthesized findings through affinity mapping and created a low-fidelity flow covering preferences, filters, ranked matches, comparison, saving, and connection.
- Evaluated the wireframes with two participants through think-aloud tasks, questionnaires, and semi-structured interviews, identifying navigation, content, explanation, and feedback improvements.
